ADARSH S

Chennai | +91 9791015292 | samadarsh14@gmail.com | LinkedIn/samadarsh14 | GitHub/samadarsh | Portfolio

EDUCATION

Bachelor's Degree (B.Tech AI & Data Science) *Nov 2020 – March 2024*

- Easwari Engineering College, Ramapuram, Chennai

HSC *June 2019 – March 2020*

- Don Bosco Matriculation Higher Secondary School, Peravallur, Chennai

SSLC *June 2017 – March 2018*

- Don Bosco Matriculation Higher Secondary School, Peravallur, Chennai

WORK EXPERIENCE

AI Red-Teaming Specialist (Contract) | Outlier *July 2024 – May 2025*

- Authored model-breaking web-research tasks in BrowseComp and GAIA formats targeting frontier LLM failures.
- Discovered obscure facts via OSINT and verified answer keys against primary sources and archives.
- Traced model search trajectories and reasoning chains to diagnose root causes of task failures.
- Reviewed peer-authored tasks for ambiguity, answer uniqueness, and source integrity before benchmark submission.

AI Benchmark Task Author (Contract) | Mercor *June 2025 – Apr 2026*

- Designed multi-hop reasoning and reasoning-trap prompts that reliably exposed weaknesses in SOTA models.
- Tested tasks against leading LLMs, confirming reproducible failures across repeated model runs.
- Distinguished genuine model limitations from prompt ambiguity using run logs and intermediate outputs.
- Scaled validated model-breaking patterns across new domains while maintaining precise, unambiguous task wording.

AI Engineer | Neeroma Technologies *May 2026 – Sep 2026*

- Worked on Yantra, a multi-agent platform, evaluating LLM agent behavior across design, deployment, and ticketing workflows.
- Debugged L5 Deploy Agent trajectories, tracing tool calls and reasoning steps to diagnose agent failures.
- Built L6 Tickets Agent triage logic and test cases exposing edge-case failures in agent decision-making.
- Verified QLearn AI tutor outputs for factual accuracy and grounding, flagging hallucinations in contextual Q&A.
- Used observability logs and regression tests to isolate root causes of agent failures.

PROJECTS

RepoMind – AI-Powered Code Repository Analysis Using LLMs

- Developed an end-to-end Generative AI system to analyze and understand code repositories, providing insights from project structures.
- Applied NLP techniques to process repository data, extract meaningful context, and generate concise summaries.
- Designed the solution with modular pipelines and prompt engineering to deliver accurate outputs.
- Github: https://github.com/samadarsh/RepoMind

BiteWise: Smart AI Food Ordering & Nutrition Platform

- Developed an end-to-end multi-tenant application featuring a FastAPI backend, Next.js frontend, and a Streamlit developer playground.
- Implemented secure per-user Swiggy OAuth 2.1 authentication with PKCE, incorporating AES-256-GCM encryption at rest.
- Designed a robust Order Safety State with budget caps, idempotency protection, and COD constraints to prevent duplicate ordering.
- Approved by Swiggy Builders Club, integrating official Swiggy MCP APIs for agent-driven meal search and checkout workflows.
- Live app: https://bite-wise-theta.vercel.app

TECHNICAL SKILLS

AI Evaluation & Red-Teaming

- BrowseComp & GAIA Task Authoring
- LLM Red-Teaming & Adversarial Prompting
- OSINT & Primary-Source Verification
- Model Trajectory Debugging & Failure Analysis

Programming, Frameworks & Tools

- Python (NumPy, Pandas, Scikit-learn)
- LangChain & LangGraph
- Hugging Face Transformers
- FastAPI, Flask, Git & GitHub
